Introduction

Thank you for using Metro's Construction Salvage and Recycling Toolkit. Using this guide to salvage and recycle helps:

- maximize the recovery of reusable materials from your job site.
- save money and conserve natural resources.
- keep valuable materials out of the landfill, which is good for businesses and the environment.

Find this guide, an interactive directory and a map to locate the recycler closest to you at oregonmetro.gov/toolkit.

Tips on using this guide

Keep this guide handy to find a recycler near your job site. If you already know the name of the recycler you want to use, simply look it up in the directory on page 113.

Can't find a recycler for a specific material? It may not be recyclable. Ask Metro for help. Metro can also provide additional recycling options for specific materials, and the most current information on recyclers. Ask Metro at **503-234-3000** or oregonmetro.gov/toolkit.

How to salvage and recycle

1. Deconstruct and salvage

When demolishing part or all of a building, first deconstruct it to remove salvageable items as early in the project as possible.

Deconstruction involves disassembling the structure in reverse order of assembly to harvest the materials.

Salvaging involves removing the reusable building materials before demolition. See page 81 for a list of salvage and deconstruction resources.

Benefits: Generates revenue from the resale of materials. Helps projects qualify for tax credits. Provides building materials that can be reused, which is good for business and the environment.

2. Separate

Separate your different types of debris (wood, metal, drywall, etc.) into similar categories. Start by identifying three or four materials you have the most of and that require the least labor to separate. Keep these materials in separate loads.

Benefits: Fees for separated recyclable materials are usually lower than those for mixed materials.

3. Combine in one container

Put remaining construction and demolition debris into one container or load. Don't worry about sorting. All mixed construction debris, regardless of which facility you use, is sorted and recycled for you. Household garbage, food, liquid, hazardous waste and torch-down roofing are not accepted in mixed loads. See page 51 to find a facility close to your job site.

Benefits: Requires little or no additional sorting at the job site. Great for small jobs like a bathroom remodel or jobs with limited space for multiple drop boxes.

Mixed construction debris recycling

Combine different types of construction and demolition debris in one container or load. Don't worry about sorting. All mixed construction debris, regardless of which facility you use, is sorted and recycled for you. The following items are not accepted in mixed loads—household garbage, food, liquid, hazardous waste and torch-down roofing. Ask Metro to learn more at **503-234-3000** or **oregonmetro.gov/toolkit**.
